

**Summer Field STAGE  
IN  
BIODIVERSITY OF MARINE ENVIRONMENT AND BIOMONITORING**

Procida Island

June 13 2022

*This field stage will represent a first training to approach the identification of benthic marine organisms (both animal and plant species ).*

*Application of methods for monitoring and evaluating the ecological status of coastal waters using target organisms or habitats will be practically illustrated.*

*The stage includes the aquaculture activity training at "Echinoidea" sea urchin facility*

*Never stop growing with access to everything worth knowing.*
